Examiner	Art Unit	
Celine X Qian	1636	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.

- Failure Any re	o period for reply is specified above, the maximum stature to reply within the set or extended period for reply wireply received by the Office later than three months after patent term adjustment. See 37 CFR 1.704(b).	ill, by statute, cause the application	cation to become ABANDONED (35 U.S.C. § 133). nmunication, even if timely filed, may reduce any

DETAILED ACTION

Claims 1-33 are pending in the application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 23, drawn to a method for detecting an interaction between a first test agent and a second test agent by using two fusion constructs, a method for selecting compounds capable interfering with an interaction between a first test and a second test agent by using two fusion constructs *in vitro* in the presence of a test compound, classified in class 435, subclass 320.1.
- II. Claims 13-15 and 24-26, drawn to a method for detecting protein-protein interaction by using two fusion proteins in vitro, and a method for selecting compounds capable of interfering with a protein-protein interaction by using two fusion proteins in vitro in the presence of the test compounds, classified in class 530, subclass 402.
- III. Claims 16-21 and 27-32, drawn to a method for detecting protein-protein interaction by using a protein microarray, and a method for selecting compounds capable of interfering with a protein-protein interaction by using a protein microarray in the presence of the one or more test compound, classified in class 436, subclass 518.
- IV. Claims 22 and 33, drawn to a method for detecting protein-protein interaction by expressing two fusion proteins *in vivo*, and a method of selecting compounds

capable of interfering with a protein-protein interaction by expressing two fusion proteins and a test polypeptide *in vivo*, classified in class 435, subclass 325.

The inventions are distinct, each from the other for following reasons.

The inventions of Groups I-IV are patentably distinct from each other because the inventions are drawn to methods that require different starting material and modes of operation.

Each method comprises different steps for achieving distinct purposes. Therefore, the inventions of Groups I-IV are patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. A search of the subject matter of one invention would not be coextensive with a search of the other invention, and therefore the search would be burdensome. Each invention is capable of supporting a separate patent.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Celine X Qian whose telephone number is 571-272-0777. The examiner can normally be reached on 9:30-6:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Remy Yucel Ph.D. can be reached on 571-272-0781. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
